

## Press Release

### **Pentagon Highly Commended for Sustainable Technology**

In recognition of the successful implementation of our sustainable development plan and commitment to a culture of continuous improvement backed by a programme of active employee engagement Pentagon were highly commended at the recent international IChemE Awards for Innovation and Excellence 2008.

The awards aim to recognise and promote organisations who make an outstanding contribution to safety, the environment, sustainable development and other aspects of the process industries.

They are given in the general context of sustainable development, defined as ***“development which meets the needs of the present without compromising the ability of future generations to meet their needs”***. This means ensuring that economic development occurs without damaging the environment by over-exploiting natural resources, and that its benefits are shared equitably in society.

Pentagon are proud to be highly commended in the ABB Global Consulting Award category for Sustainable Technology - given for the project or process which best demonstrates innovation in the fields of waste reduction, recycling, reuse and the lengthening of product lifecycles thus reducing environmental impact.

**Pentagon**, an independent UK-based business owned by its management, is well on the way to the successful transformation of its businesses since acquiring long-established sites from blue-chip multi-nationals.

**Pentagon's** business model operates toll and contract manufacture agreements, along with a range of own products derived from an wide range of technologies, including Phosgene, Grignard, Sodium dispersion, Maleic anhydride chemistry and Halogenation.
